

**Volume 7:
Compounds of Groups 13 and 2
(Al, Ga, In, Tl, Be ... Ba)**

	Introduction	
	H. Yamamoto	1
7.1	Product Class 1: Aluminum Compounds	
7.1.1	Product Subclass 1: Zerovalent Aluminum and Its Alloys	
	S. Saito	5
7.1.2	Product Subclass 2: Aluminum Hydrides	
	S. Saito	15
7.1.3	Product Subclass 3: Aluminum Halides	
	S. Saito	95
7.1.4	Product Subclass 4: Aluminum Alkoxides and Phenoxides	
	T. Ooi and K. Maruoka	131
7.1.5	Product Subclass 5: Aluminum Thiolates	
	T. Ooi and K. Maruoka	197
7.1.6	Product Subclass 6: Aluminum Selenolates	
	T. Ooi and K. Maruoka	215
7.1.7	Product Subclass 7: Aluminum Amides	
	T. Ooi and K. Maruoka	225
7.1.8	Product Subclass 8: Aluminum Oxide (Alumina)	
	S. Tsuboi	247
7.1.9	Product Subclass 9: Triorganoaluminum Compounds Involving Aluminum Alkyls, Alkenyls, Aryls, and Cyanides	
	M. Oishi	261
7.2	Product Class 2: Gallium Compounds	
	M. Yamaguchi	387
7.3	Product Class 3: Indium Compounds	
	T.-P. Loh	413
7.4	Product Class 4: Thallium Compounds	
	I. E. Markó	453
7.5	Product Class 5: Beryllium Compounds	
	H. Yasuda	487
7.6	Product Class 6: Magnesium Compounds	

7.6.1	Product Subclass 1: Magnesium Metal J.-H. Zhang, C. C. K. Keh, and C.-J. Li	503
7.6.2	Product Subclass 2: Magnesium Hydride J.-H. Zhang, C. C. K. Keh, and C.-J. Li	513
7.6.3	Product Subclass 3: Magnesium–Metal Reagents J.-H. Zhang, C. C. K. Keh, and C.-J. Li	517
7.6.4	Product Subclass 4: Alkynyl Grignard Reagents A. Yanagisawa	523
7.6.5	Product Subclass 5: Aryl Grignard Reagents A. Yanagisawa	527
7.6.6	Product Subclass 6: Alkenyl Grignard Reagents A. Yanagisawa	533
7.6.7	Product Subclass 7: Propargylic Grignard Reagents A. Yanagisawa	541
7.6.8	Product Subclass 8: Benzylic Grignard Reagents A. Yanagisawa	549
7.6.9	Product Subclass 9: Allylic Grignard Reagents A. Yanagisawa	555
7.6.10	Product Subclass 10: Alkyl Grignard Reagents K. Oshima	573
7.6.11	Product Subclass 11: Grignard Reagents with Transition Metals T. Takahashi and Y. Liu	597
7.6.12	Product Subclass 12: Magnesium Halides M. Shimizu	629
7.6.13	Product Subclass 13: Magnesium Oxide, Alkoxides, and Carboxylates M. Shimizu	645
7.6.14	Product Subclass 14: Magnesium Amides M. Shimizu	661
7.6.15	Product Subclass 15: Dialkyl- and Diarylmagnesiums J.-H. Zhang, C. C. K. Keh, and C.-J. Li	669
7.7	Product Class 7: Calcium Compounds K. Mochida	677
7.8	Product Class 8: Strontium Compounds N. Miyoshi	685

7.9	Product Class 9: Barium Compounds	
	A. Yanagisawa	695
	Keyword Index	735
	Author Index	765
	Abbreviations	797

Table of Contents

Introduction

H. Yamamoto

Introduction	1
---------------------------	---

7.1 Product Class 1: Aluminum Compounds

7.1.1 Product Subclass 1: Zerovalent Aluminum and Its Alloys

S. Saito

7.1.1 Product Subclass 1: Zerovalent Aluminum and Its Alloys	5
Synthesis of Product Subclass 1	5
7.1.1.1 Method 1: Aluminum Treated with Mercury(II) Chloride	5
7.1.1.2 Method 2: Aluminum Treated with Potassium Hydroxide in Methanol	7
7.1.1.3 Method 3: Aluminum as Reductant for Titanium(IV) Chloride	7
7.1.1.4 Method 4: Aluminum–Lead System	8
7.1.1.5 Method 5: Aluminum–Vanadium–Chlorosilane Combination	9
7.1.1.6 Method 6: Aluminum–Nickel(II) Chloride System	10
7.1.1.7 Method 7: Aluminum Activated by an Aqueous Fluoride Salt	10
7.1.1.8 Method 8: Aluminum–Cobalt Alloy	11
7.1.1.9 Method 9: Aluminum–Nickel Alloy	12
7.1.1.10 Method 10: Activated Aluminum by Reduction of Aluminum Halides	12
7.1.1.11 Method 11: Aluminum–Tin(II) Chloride System	13

7.1.2 Product Subclass 2: Aluminum Hydrides

S. Saito

7.1.2 Product Subclass 2: Aluminum Hydrides	15
Synthesis of Product Subclass 2	16
7.1.2.1 Method 1: Lithium Aluminum Hydride from Lithium Hydride and Aluminum Trichloride	16
7.1.2.2 Method 2: Magnesium and Calcium Aluminum Hydride from Lithium or Sodium Aluminum Hydride	17
7.1.2.3 Method 3: Lithium Aluminum Hydride with Copper Salts	18
7.1.2.3.1 Variation 1: Lithium Aluminum Hydride with Copper(II) Chloride for Reductive Fission of Sulfides	18
7.1.2.3.2 Variation 2: Lithium Aluminum Hydride with Copper(I) Iodide for Conjugate Reduction of α,β -Unsaturated Carbonyl Compounds	18
7.1.2.3.3 Variation 3: Lithium Aluminum Hydride with Copper(I) Cyanide for 1,4-Reduction of an Oxaspiroene	19
7.1.2.4 Method 4: Lithium Aluminum Hydride with Titanium Compounds	20

7.1.2.4.1	Variation 1:	Lithium Aluminum Hydride with Titanium(III) Chloride for Reductive Self-Coupling of Carbonyl Compounds	20
7.1.2.4.2	Variation 2:	Lithium Aluminum Hydride with Titanium(IV) Iodide for the Preparation of α,α -Disubstituted Acetic Acids from Ketones	20
7.1.2.4.3	Variation 3:	Lithium Aluminum Hydride with Dichlorobis(η^5 -cyclopentadienyl)titanium(IV) for the Dehydroxylation of Allylic Alcohols	21
7.1.2.4.4	Variation 4:	Lithium Aluminum Hydride with Titanium(IV) Chloride for the Deoxygenation of <i>N</i> -Oxides	22
7.1.2.4.5	Variation 5:	Lithium Aluminum Hydride with Titanium(IV) Chloride for the Preparation of Lithium Alkylaluminates from Alkenes	22
7.1.2.5	Method 5:	Lithium Aluminum Hydride with Various Metal Chloride Salts for the Catalytic Reduction of Alkynes, Alkenes, and Aryl and Alkyl Chlorides	23
7.1.2.6	Method 6:	Lithium Aluminum Hydride with Nickel Compounds for Desulfurization Reactions	25
7.1.2.7	Method 7:	Lithium Aluminum Hydride with Zirconium Compounds	26
7.1.2.7.1	Variation 1:	Lithium Aluminum Hydride with Zirconium(IV) Compounds for Hydroaluminations of Alkenes	26
7.1.2.7.2	Variation 2:	Use of Lithium Aluminum Hydride for the Preparation of Bis(η^5 -cyclopentadienyl)(hydrido)zirconium(IV) Complexes	26
7.1.2.8	Method 8:	Lithium Aluminum Hydride with Boron Trifluoride	27
7.1.2.9	Method 9:	Lithium Aluminum Hydride with Iron Compounds	28
7.1.2.9.1	Variation 1:	Lithium Aluminum Hydride and Dodecacarbonyltriiron(0) for the Reductive Dimerization of α,β -Unsaturated Ketones	28
7.1.2.9.2	Variation 2:	Lithium Aluminum Hydride and Iron(II) or Iron(III) Chloride for Dehalogenation or Detosylation	29
7.1.2.10	Method 10:	Lithium Aluminum Hydride with Manganese(II) Chloride for the Allylation of Aldehydes or Ketones	29
7.1.2.11	Method 11:	Lithium Aluminum Hydride with Silica Gel for the Reduction of Oxo Esters To Give Hydroxy Esters	30
7.1.2.12	Method 12:	Lithium Aluminum Hydride with Selenium Reagents	31
7.1.2.12.1	Variation 1:	Lithium Aluminum Hydride and Diphenyl Diselenide for Ring Cleavage of Oxetanes and Oxolanes	31
7.1.2.12.2	Variation 2:	Lithium Aluminum Hydride and Elemental Selenium	31
7.1.2.13	Method 13:	Lithium Aluminum Hydride with Vanadium(III) Chloride for Dehalogenative Homocoupling of Benzylic and Allylic Halides	32
7.1.2.14	Method 14:	Lithium Aluminum Hydride with Lithium Iodide for Selective Reduction of β -Alkoxy Ketones	33
7.1.2.15	Method 15:	Lithium Aluminum Hydride with Cerium(III) Chloride for Reductive Dehalogenation and Reduction of Phosphine Oxides to Phosphines	33
7.1.2.16	Method 16:	Lithium Aluminum Hydride with Chromium(III) Chloride	34
7.1.2.16.1	Variation 1:	Lithium Aluminum Hydride with Chromium(III) Chloride for Dehalogenative Reductions	34
7.1.2.16.2	Variation 2:	Lithium Aluminum Hydride with Chromium(III) Chloride in a Grignard-Type Reaction	34
7.1.2.17	Method 17:	Lithium Aluminum Hydride with Alkoxides for the Reduction of Oximes to Amines	35

7.1.2.18	Method 18:	Lithium Aluminum Hydride with Phosphorus Reagents	36
7.1.2.18.1	Variation 1:	Lithium Aluminum Hydride with Diphosphorus Tetraiodide	36
7.1.2.18.2	Variation 2:	Lithium Aluminum Hydride with Hexamethylphosphoric Triamide for the Hydrolysis of Oximes to Ketones	36
7.1.2.19	Method 19:	Amine- and Amide-Aluminate Complexes Prepared from Lithium Aluminum Hydride and Amines	37
7.1.2.19.1	Variation 1:	Preparation of 3-Substituted Pyridines via a Lithium Tetra-aminoaluminate Complex Formed from Lithium Aluminum Hydride and Pyridine	37
7.1.2.19.2	Variation 2:	Reduction of Carbonyl Compounds by Lithium Tris(diethylamino)hydroaluminate Prepared from Lithium Aluminum Hydride and Diethylamine	37
7.1.2.19.3	Variation 3:	Ring-Opening Aminations by Lithium Tetraaminoaluminates Prepared from Lithium Aluminum Hydride and Excess Amine	38
7.1.2.19.4	Variation 4:	Lithium Aluminum Hydride-Amine Complexes	39
7.1.2.20	Method 20:	Partial Reduction of Carboxylic Acids and Acid Chlorides to Aldehydes by Sodium Diethyl(hydro)piperidinoaluminate Prepared from Sodium Diethyldihydroaluminate and Piperidine	41
7.1.2.21	Method 21:	Lithium Alkoxyaluminum Hydrides Prepared from Lithium Aluminum Hydride and Alcohols	42
7.1.2.22	Method 22:	Chiral Aluminum Hydrides Formed from Chiral Alcohols or Amines and Lithium or Sodium Aluminum Hydride	44
7.1.2.23	Method 23:	Sodium Tri- <i>tert</i> -butoxy(hydro)aluminate	52
7.1.2.24	Method 24:	Lithium Tri- <i>tert</i> -butoxy(hydro)aluminate	52
7.1.2.24.1	Variation 1:	Asymmetric Reduction of Oxo Groups by Lithium Tri- <i>tert</i> -butoxy(hydro)aluminate	54
7.1.2.24.2	Variation 2:	Use of Lithium Tri- <i>tert</i> -butoxy(hydro)aluminate for the Preparation of Zirconium Complexes	57
7.1.2.25	Method 25:	Sodium Bis(2-methoxyethoxy)aluminum Hydride	57
7.1.2.26	Method 26:	Asymmetric Reduction of Oxo Groups to Hydroxy Groups by Alkoxyaluminum Hydrides	59
7.1.2.26.1	Variation 1:	Asymmetric Reduction of α -Oxo Esters to α -Hydroxy Esters by Lithium Trialkoxy(hydro)aluminates	59
7.1.2.26.2	Variation 2:	Asymmetric Reduction of Ketones to Alcohols by Lithium Trialkoxy(hydro)aluminates	61
7.1.2.26.3	Variation 3:	Asymmetric Reduction of Oxo Groups by Dialkoxyaluminum Hydrides	63
7.1.2.27	Method 27:	Diisobutylaluminum Hydride with Hexamethylphosphoric Triamide	64
7.1.2.28	Method 28:	Diisobutylaluminum Hydride with a Phosphorylacetate	66
7.1.2.29	Method 29:	Diisobutylaluminum Hydride with Triethylamine	66
7.1.2.30	Method 30:	Diisobutylaluminum Hydride with Tin(II) Chloride	67
7.1.2.31	Method 31:	Diisobutylaluminum Hydride with Magnesium(II) Bromide	68
7.1.2.32	Method 32:	Diisobutylaluminum Hydride with Zinc(II) Chloride	69
7.1.2.33	Method 33:	Diisobutylaluminum Hydride with Nickel Compounds	70
7.1.2.34	Method 34:	Diisobutylaluminum Hydride with Boron Trifluoride	72
7.1.2.35	Method 35:	Diisobutylaluminum Hydride with Titanium Compounds	72
7.1.2.36	Method 36:	Diisobutylaluminum Hydride with Lithium Azide	74

7.1.2.37	Method 37:	Diisobutylaluminum Hydride with Alkylolithiums	75
7.1.2.38	Method 38:	Other Stereoselective Synthesis with Diisobutylaluminum Hydride	78
7.1.2.39	Method 39:	Aluminum Trihydride	78
7.1.2.40	Method 40:	Trivalent Aluminum Hydride–Amine and –Amide Complexes from Lithium Aluminum Hydride or Aluminum Trihydride and Amines	79
7.1.2.41	Method 41:	Diaminoaluminum Hydride Complexes from Aluminum(0), Dihydrogen, and Amines	84
7.1.2.42	Method 42:	Trivalent Aluminum Hydride Halides from Lithium Aluminum Hydride and Aluminum Trihalides	84
7.1.2.43	Method 43:	Stereospecific Hydroaluminations of C=C and C≡C Bonds by Various Aluminum Hydrides	86

7.1.3 Product Subclass 3: Aluminum Halides

S. Saito

7.1.3	Product Subclass 3: Aluminum Halides	95
	Synthesis of Product Subclass 3	96
7.1.3.1	Method 1: Aluminum Chloride–Titanium Reagents	96
7.1.3.2	Method 2: Aluminum Chloride–Zirconium Reagents	101
7.1.3.3	Method 3: Aminoaluminum Chlorides	105
7.1.3.4	Method 4: Aluminum Trichloride with Chloroamines	107
7.1.3.5	Method 5: Ethoxy- and Methoxyaluminum Chlorides	107
7.1.3.6	Method 6: Aluminum Chlorides with Chiral Alkoxide Ligands	110
7.1.3.7	Method 7: Aryloxyaluminum Chlorides	111
7.1.3.8	Method 8: Aluminum Chlorides with Chiral Bialkoxide or Biaryloxy Ligands	112
7.1.3.9	Method 9: Aluminum Halides with Thiols or Sulfides	116
7.1.3.10	Method 10: Aluminum Trichloride with Benzeneseleninyl Chloride	118
7.1.3.11	Method 11: Aluminum Chlorides with Alkylaluminums	118
7.1.3.12	Method 12: Aluminum Chlorides with Metal Salts	119
7.1.3.13	Method 13: Aluminum Chloride with an Azidoarene	122
7.1.3.14	Method 14: Aluminum Trichloride with a Resin	123
7.1.3.15	Method 15: Aluminum Trichloride without Additives	123
7.1.3.16	Method 16: Aluminum Fluorides	125
7.1.3.17	Method 17: Aluminum Triiodide	127

7.1.4 Product Subclass 4: Aluminum Alkoxides and Phenoxides

T. Ooi and K. Maruoka

7.1.4	Product Subclass 4: Aluminum Alkoxides and Phenoxides	131
	Synthesis of Product Subclass 4	131
7.1.4.1	Method 1: Reaction of Aluminum with Alcohols	131

7.1.4.2	Method 2:	Treatment of Alkylaluminum Compounds with Alcohols or Phenols	132
7.1.4.2.1	Variation 1:	Dialkylaluminum Carboxylates and Sulfonates	133
7.1.4.3	Method 3:	Treatment of Alkylaluminum Hydrides with Alcohols or Phenols	133
7.1.4.4	Method 4:	Treatment of Lithium Aluminum Hydride with Alcohols or Phenols	134
		Applications of Product Subclass 4 in Organic Synthesis	135
7.1.4.5	Method 5:	Aluminum Alkoxides in Organic Synthesis	135
7.1.4.5.1	Variation 1:	Reduction Reactions	135
7.1.4.5.2	Variation 2:	Oxidation Reactions	141
7.1.4.5.3	Variation 3:	The Tishchenko Reaction	142
7.1.4.5.4	Variation 4:	Alkylation	143
7.1.4.5.5	Variation 5:	The Aldol Reaction	145
7.1.4.5.6	Variation 6:	Michael Addition	146
7.1.4.5.7	Variation 7:	Transformation of Epoxides	146
7.1.4.6	Method 6:	Aluminum Phenoxides in Organic Synthesis	147
7.1.4.6.1	Variation 1:	Carbonyl Addition and Reduction	147
7.1.4.6.2	Variation 2:	Conjugate Addition	156
7.1.4.6.3	Variation 3:	The Aldol Reaction	165
7.1.4.6.4	Variation 4:	The Ene Reaction	168
7.1.4.6.5	Variation 5:	The Pudovik Reaction	169
7.1.4.6.6	Variation 6:	Oxidative Methylation	169
7.1.4.6.7	Variation 7:	α -Alkylation of Carbonyl Compounds	170
7.1.4.6.8	Variation 8:	The Hetero-Diels–Alder Reaction	171
7.1.4.6.9	Variation 9:	The Diels–Alder Reaction	172
7.1.4.6.10	Variation 10:	Cycloaddition	176
7.1.4.6.11	Variation 11:	Discrimination of Ethers	180
7.1.4.6.12	Variation 12:	The Claisen Rearrangement	180
7.1.4.6.13	Variation 13:	Epoxide Rearrangement	183
7.1.4.6.14	Variation 14:	Acetal Cleavage	185
7.1.4.6.15	Variation 15:	Intramolecular Prenyl Transfer Reaction	185
7.1.4.6.16	Variation 16:	Asymmetric Cyclization	186
7.1.4.6.17	Variation 17:	Radical Reactions	187
7.1.4.6.18	Variation 18:	Polymerization	190
7.1.5	Product Subclass 5: Aluminum Thiolates		
	T. Ooi and K. Maruoka		
7.1.5	Product Subclass 5: Aluminum Thiolates		197
	Synthesis of Product Subclass 5		197
7.1.5.1	Method 1:	Treatment of Alkylaluminum Compounds with Thiols	197
7.1.5.1.1	Variation 1:	Bis(dialkylaluminum) Sulfides	199
7.1.5.1.2	Variation 2:	Bis(diethylaluminum) Sulfate	199
7.1.5.2	Method 2:	Treatment of Aluminum Hydrides with Thiols or Disulfides ...	200

	Applications of Product Subclass 5 in Organic Synthesis	200
7.1.5.3	Method 3: Use of Dialkylaluminum Alkanethiolates	200
7.1.5.3.1	Variation 1: Transformation of Ethers	200
7.1.5.3.2	Variation 2: Transformation of Epoxides	201
7.1.5.3.3	Variation 3: Transformation of Acetals	202
7.1.5.3.4	Variation 4: Transformation of Aldehydes	203
7.1.5.3.5	Variation 5: Transformation of Esters	204
7.1.5.3.6	Variation 6: Transformation of α,β -Unsaturated Ketones	206
7.1.5.3.7	Variation 7: Transformation of α,β -Unsaturated Nitriles	207
7.1.5.3.8	Variation 8: Transformation of O-Sulfonyloximes	207
7.1.5.3.9	Variation 9: Transformation of Allyl Phosphate Esters	208
7.1.5.4	Method 4: Use of Bis(dialkylaluminum) Alkanedithiolates	208
7.1.5.5	Method 5: Use of Bis(diethylaluminum) Sulfide	211
7.1.5.6	Method 6: Use of Bis(diethylaluminum) Sulfate	211
7.1.6	Product Subclass 6: Aluminum Selenolates	
	T. Ooi and K. Maruoka	
7.1.6	Product Subclass 6: Aluminum Selenolates	215
	Synthesis of Product Subclass 6	215
7.1.6.1	Method 1: Treatment of Alkylaluminum Compounds with Selenium Metal	215
7.1.6.2	Method 2: Treatment of Aluminum Hydrides with Selenols or Diselenides	215
7.1.6.3	Method 3: Treatment of Hexamethyldisilasesenane with Dimethylaluminum Chloride or Treatment of Hexabutyldistannasesenane with Trimethylaluminum	216
	Applications of Product Subclass 6 in Organic Synthesis	217
7.1.6.4	Method 4: Use of Dimethylaluminum Methaneselenolate	217
7.1.6.5	Method 5: Use of Diisobutylaluminum Benzeneselenolate and Its Derivatives	218
7.1.6.6	Method 6: Use of Bis(dimethylaluminum) Selenide	221
7.1.7	Product Subclass 7: Aluminum Amides	
	T. Ooi and K. Maruoka	
7.1.7	Product Subclass 7: Aluminum Amides	225
	Synthesis of Product Subclass 7	225
7.1.7.1	Method 1: Treatment of Alkylaluminum Compounds with Amines	225
7.1.7.1.1	Variation 1: Dialkylaluminum Hydrazides	226
7.1.7.2	Method 2: Treatment of Organoaluminum Hydrides with Amines	227
7.1.7.2.1	Variation 1: By Reduction of Nitriles	228
7.1.7.2.2	Variation 2: By Reduction of Azomethines	228
7.1.7.2.3	Variation 3: By Addition to Enamines	229
7.1.7.3	Method 3: Treatment of Aluminum Halides with Metal Amides	229

	Applications of Product Subclass 7 in Organic Synthesis	230
7.1.7.4	Method 4: Transformation of Esters	230
7.1.7.5	Method 5: Transformation of Lactones	232
7.1.7.6	Method 6: Transformation of Nitriles	234
7.1.7.7	Method 7: Transformation of Ketones	235
7.1.7.8	Method 8: Epoxide Cleavage with Aluminum Reagents	236
7.1.7.9	Method 9: Isomerization of Epoxides to Allylic Alcohols	238
7.1.7.10	Method 10: 1,3-Diene Synthesis	240
7.1.7.11	Method 11: Transformation of Hydrazones	242
7.1.7.12	Method 12: N-Alkylation of Allylic Derivatives	243
7.1.7.13	Method 13: Hydrometalation	244
7.1.7.14	Method 14: Polymerization	245
7.1.8	Product Subclass 8: Aluminum Oxide (Alumina) S. Tsuboi	
7.1.8	Product Subclass 8: Aluminum Oxide (Alumina)	247
	Synthesis of Product Subclass 8	247
7.1.8.1	Method 1: Preparation and Characterization of Aluminum Oxide	247
	Applications of Product Subclass 8 in Organic Synthesis	247
7.1.8.2	Method 2: Alumina-Promoted Reactions	248
7.1.8.2.1	Variation 1: Additions and Cyclizations	248
7.1.8.2.2	Variation 2: Oxidation and Reduction	248
7.1.8.2.3	Variation 3: Rearrangement and Isomerization	252
7.1.8.2.4	Variation 4: Elimination and Addition	254
7.1.8.2.5	Variation 5: Ring Closure and Ring Opening	254
7.1.8.3	Method 3: Reactions Using Alumina–Potassium Fluoride as a Catalyst	255
7.1.8.4	Method 4: Reactions Using Alumina–Potassium Hydroxide as a Catalyst	256
7.1.8.5	Method 5: Synthesis of Halides Using Alumina and a Halogen	256
7.1.8.6	Method 6: Synthesis of Organic Sulfides Using Alumina and Sodium Sulfide	257
7.1.8.7	Method 7: Oxidation Using Alumina and Barium or Potassium Manganate	258
7.1.9	Product Subclass 9: Triorganoaluminum Compounds M. Oishi	
7.1.9	Product Subclass 9: Triorganoaluminum Compounds	261
	Synthesis of Product Subclass 9	262
7.1.9.1	Method 1: By Reactions of Aluminum Metal with Organic Compounds	262
7.1.9.1.1	Variation 1: From Alkenes and Hydrogen (Direct Synthesis)	262
7.1.9.1.2	Variation 2: From Alkyl Halides and Subsequent Disproportionation or Reduction	263
7.1.9.2	Method 2: By Reaction of Organoaluminum Compounds with Unsaturated Hydrocarbons	264

7.1.9.2.1	Variation 1:	Displacement Reactions	264
7.1.9.2.2	Variation 2:	Alumination of Carbon Brønsted Acids	265
7.1.9.3	Method 3:	By Reaction with Organometallic Precursors	266
7.1.9.3.1	Variation 1:	From Triorganoborane Compounds	266
7.1.9.3.2	Variation 2:	From Organomercury Compounds	268
7.1.9.3.3	Variation 3:	From Organotin Compounds	270
7.1.9.3.4	Variation 4:	From Grignard and Organolithium Reagents	270
7.1.9.4	Method 4:	From Tetraorganoaluminates	275
7.1.9.4.1	Variation 1:	From Aluminum Halides	275
7.1.9.4.2	Variation 2:	From Active Metals	276
7.1.9.5	Method 5:	By Homologation with Diazoalkanes	276
		Applications of Product Subclass 9 in Organic Synthesis	277
7.1.9.6	Method 6:	Addition to C—C Multiple Bonds	277
7.1.9.6.1	Variation 1:	Carboalumination of Alkenes and Alkynes	278
7.1.9.6.2	Variation 2:	Hydroalumination of Alkenes and Alkynes	287
7.1.9.6.3	Variation 3:	Cyclopropanation	292
7.1.9.6.4	Variation 4:	Conjugate Addition	294
7.1.9.7	Method 7:	Addition Reactions to Carbon—Heteroatom Multiple Bonds	303
7.1.9.7.1	Variation 1:	Reactions with Carbonyl Substrates	303
7.1.9.7.2	Variation 2:	Addition to Imines and Nitriles	314
7.1.9.8	Method 8:	Cleavage and Substitution Reactions of Carbon—Heteroatom Bonds	318
7.1.9.8.1	Variation 1:	Ring Opening of Epoxides and Aziridines	318
7.1.9.8.2	Variation 2:	Cleavage of Acetals and Ketals	325
7.1.9.8.3	Variation 3:	Noncatalyzed Coupling Reactions	328
7.1.9.8.4	Variation 4:	Metal-Catalyzed Coupling Reactions	334
7.1.9.9	Method 9:	Rearrangement Reactions	341
7.1.9.9.1	Variation 1:	Claisen Rearrangement	341
7.1.9.9.2	Variation 2:	1,3-Rearrangement of Acetals	346
7.1.9.9.3	Variation 3:	3-Aza-Cope Rearrangement	348
7.1.9.9.4	Variation 4:	Pinacol-Type Rearrangement	349
7.1.9.9.5	Variation 5:	Beckmann-Type Rearrangement	352
7.1.9.10	Method 10:	Polymerization Reactions	355
7.1.9.10.1	Variation 1:	Alkene Polymerization: Chain Transfer, Catalytic, and Cocatalytic Behaviors	355
7.1.9.10.2	Variation 2:	Ionic Polymerization of Polar Monomers	362
7.1.9.10.3	Variation 3:	Radical Polymerization of Polar Monomers	364
7.1.9.10.4	Variation 4:	Ring-Opening Polymerization	365
7.2	Product Class 2: Gallium Compounds		
	M. Yamaguchi		
7.2	Product Class 2: Gallium Compounds		387
7.2.1	Product Subclass 1: Organogallium(III) Complexes Containing Gallium—Gallium Bonds		387
	Synthesis of Product Subclass 1		387

7.2.1.1	Method 1: From Organometallic Compounds and Gallium Halides	387
7.2.1.2	Method 2: Reductive Coupling of Organogallium(III) Halides	388
7.2.2	Product Subclass 2: Organogallium(III) Complexes Containing a Bond between Gallium and a Transition Metal	389
	Synthesis of Product Subclass 2	389
7.2.2.1	Method 1: From Transition Metal Hydrides and Triorganogallium Complexes	390
7.2.2.2	Method 2: From Transition Metal Anions and Organogallium(III) Halides	390
7.2.3	Product Subclass 3: Organogallium(III) Halides	391
	Synthesis of Product Subclass 3	391
7.2.3.1	Method 1: From Organometallic Compounds and Gallium(III) Halides	392
7.2.3.2	Method 2: Redistribution Reaction between Triorganogallium Complexes and Gallium(III) Halides	393
7.2.3.3	Method 3: From Alkyl Halides and Gallium(I) Halides	394
	Applications of Product Subclass 3 in Organic Synthesis	394
7.2.3.4	Method 4: Reactions Involving Organogallium(III) Halides	394
7.2.4	Product Subclass 4: Organogallium(III) Complexes Containing a Bond between Gallium and a Group 16 Element	395
	Synthesis of Product Subclass 4	395
7.2.4.1	Method 1: From Triorganogallium Complexes and Chalcogen Elements	396
7.2.4.2	Method 2: From Organic Acids and Organogallium Complexes	396
7.2.4.3	Method 3: From Metalated Organic Acids and Gallium(III) Halides	397
	Applications of Product Subclass 4 in Organic Synthesis	398
7.2.4.4	Method 4: Asymmetric Reactions Employing Gallium Catalysts	398
7.2.5	Product Subclass 5: Organogallium(III) Complexes Containing a Bond between Gallium and a Group 15 Element	399
	Synthesis of Product Subclass 5	399
7.2.5.1	Method 1: From Organic Acids and Organogallium Complexes	399
7.2.5.2	Method 2: From Metalated Organic Acids and Gallium(III) Halides	400
7.2.6	Product Subclass 6: Triorganogallium(III) Complexes	402
	Synthesis of Product Subclass 6	402
7.2.6.1	Method 1: From Organometallic Compounds and Gallium(III) Halides	402
7.2.6.2	Method 2: Redistribution Reaction between Cyclopentadienylgallium(III) Complexes and Trialkylgallium Complexes	403
	Applications of Product Subclass 6 in Organic Synthesis	404
7.2.6.3	Method 3: Reactions Involving Triorganogallium Complexes	404
7.2.7	Product Subclass 7: Organogallium(I) Complexes	404
	Synthesis of Product Subclass 7	404
7.2.7.1	Method 1: From Organometallic Reagents and Gallium(I) Halides	405
7.2.7.2	Method 2: From Arenes and Gallium(I) Halides	405

	Applications of Product Subclass 7 in Organic Synthesis	406
7.2.7.3	Method 3: Reductive Coupling Using Gallium(II) Chloride	406
7.3	Product Class 3: Indium Compounds	
	T.-P. Loh	
7.3	Product Class 3: Indium Compounds	413
7.3.1	Product Subclass 1: Allylic Indium Complexes	413
	Synthesis of Product Subclass 1	414
7.3.1.1	Method 1: Addition of Indium Metal to Allylic Halides	414
7.3.1.1.1	Variation 1: In Dimethylformamide	414
7.3.1.1.2	Variation 2: In Aqueous Media	415
7.3.1.1.3	Variation 3: Solvent-Free Conditions	415
7.3.1.2	Method 2: Insertion of Indium(I) Iodide into Allyl Iodide	416
7.3.1.3	Method 3: Transmetalation from Allylic Stannanes to Indium(III) Chloride	416
7.3.1.3.1	Variation 1: In Organic Donor Solvents	416
7.3.1.3.2	Variation 2: In Aqueous Media	417
7.3.1.4	Method 4: Diastereoselective Allylation of Carbonyl Compounds	418
7.3.1.5	Method 5: Enantioselective Allylation of Aldehydes	422
7.3.1.6	Method 6: Intramolecular Addition	423
7.3.1.7	Method 7: Carboindation of Alkynes	424
7.3.1.8	Method 8: Allylation of Enamines and Imines	426
7.3.1.9	Method 9: Formation of Vinylcyclopropanes from Ketones	427
7.3.2	Product Subclass 2: Propargylic/Allenlyc Indium Complexes	427
	Synthesis of Product Subclass 2	428
7.3.2.1	Method 1: Addition of Indium Metal to Alkynyl Bromides	428
7.3.2.1.1	Variation 1: In Dimethylformamide	428
7.3.2.1.2	Variation 2: In Aqueous Media	428
7.3.2.1.3	Variation 3: Insertion of Indium into Chiral Allenyl Iodides	428
7.3.2.2	Method 2: Tetrakis(triphenylphosphine)palladium(0)-Catalyzed Insertion of Indium(I) Iodide into 2-Ethynylaziridines	429
7.3.3	Product Subclass 3: Reformatsky-Type Indium Complexes	430
	Synthesis of Product Subclass 3	430
7.3.3.1	Method 1: Insertion of Indium Metal into α -Halo Esters and α -Halo Ketones	430
7.3.3.1.1	Variation 1: In Organic Solvent	430
7.3.3.1.2	Variation 2: In Aqueous Media	431
7.3.3.2	Method 2: Insertion of Indium(I) Iodide into α -Iodo Esters	431
7.3.3.3	Method 3: Enantioselective Aldol-Type Addition	432
7.3.4	Product Subclass 4: Indium Carbenoids	433
	Synthesis of Product Subclass 4	433
7.3.4.1	Method 1: Addition of Indium Metal to Activated Dibromomethane	433

7.3.5	Product Subclass 5: Alkylindium(III) Complexes	433
	Synthesis of Product Subclass 5	433
7.3.5.1	Method 1: Addition of Grignard Reagents to Indium(III) Chloride	433
7.3.5.2	Method 2: Insertion of Indium Metal into an Alkyl Iodide	434
	Applications of Product Subclass 5 in Organic Synthesis	434
7.3.5.3	Method 3: Cross Coupling with 1-Haloalkenes	434
7.3.5.4	Method 4: Carboindation of Alkynes with Benzylindium Sesquiodide ...	435
7.3.6	Product Subclass 6: Tetraorganoindates	435
	Synthesis of Product Subclass 6	435
7.3.6.1	Method 1: Reaction of Triorganoindium Complexes with Alkali Metals ..	435
7.3.6.2	Method 2: Reaction of Triorganoindium Complexes with Organolithium Complexes	436
7.3.6.3	Method 3: Reaction of Triorganoindium Complexes with Organoarsenic or Organoantimony Complexes	436
	Applications of Product Subclass 6 in Organic Synthesis	436
7.3.6.4	Method 4: 1,4-Addition to α,β -Unsaturated Carbonyl Compounds	436
7.3.6.5	Method 5: Allylation of Allylic Bromides	436
7.3.6.6	Method 6: Addition to Nitriles	436
7.3.7	Product Subclass 7: Indium(III) Chloride	437
	Synthesis of Product Subclass 7	437
7.3.7.1	Method 1: From Indium Metal	437
7.3.7.2	Method 2: From Indium(III) Oxide	437
	Applications of Product Subclass 7 in Organic Synthesis	437
7.3.7.3	Method 3: Prins-Type Cyclization Reactions	437
7.3.7.4	Method 4: Michael Addition of Amines	438
7.3.7.5	Method 5: Direct Aldol Reaction of Glyoxylic Acid	439
7.3.7.6	Method 6: Mukaiyama Aldol Reaction	439
7.3.7.7	Method 7: Diels–Alder Reaction	440
7.3.7.8	Method 8: Imino–Diels–Alder Reaction	441
7.3.7.9	Method 9: Ionic Diels–Alder Reaction	442
7.3.7.10	Method 10: One-Pot Mannich-Type Reaction in Water	442
7.3.7.11	Method 11: Rearrangement of Epoxides	443
7.3.7.12	Method 12: Epoxide Ring Opening with Aromatic Amines	443
7.3.7.13	Method 13: Reductive Friedel–Crafts Alkylation	444
7.3.7.14	Method 14: Deoxygenative Allylation of Aryl Ketones	444
7.3.7.15	Method 15: Reactions of α -Diazocarbonyl Compounds	445
7.3.7.16	Method 16: Three-Component Reaction of Alkenes, Glyoxylates, and Amines	445
7.3.8	Product Subclass 8: Indium(III) Trifluoromethanesulfonate	446
	Applications of Product Subclass 8 in Organic Synthesis	446
7.3.8.1	Method 1: 2-Oxonia [3,3]-Sigmatropic Rearrangement–Cyclization	446
7.3.8.2	Method 2: Acylation of Alcohols and Amines	447

7.3.8.3	Method 3:	Hetero-Diels–Alder Reaction of Danishefsky’s Diene and Imines	447	
7.3.8.4	Method 4:	Reusable Catalyst for Intramolecular Diels–Alder Reactions ..	448	
7.3.8.5	Method 5:	[4 + 2] Cycloaddition of Benzopyranone Schiff Bases	448	
7.4	Product Class 4: Thallium Compounds			
	I. E. Markó			
7.4	Product Class 4: Thallium Compounds			453
7.4.1	Product Subclass 1: Triorganothallium(III) Complexes			453
	Synthesis of Product Subclass 1			453
7.4.1.1	Method 1:	Addition of Organometallic Complexes to Diorganothallium(III) Halides	454	
7.4.1.1.1	Variation 1:	Addition of Organolithium Complexes	454	
7.4.1.1.2	Variation 2:	Addition of Organomagnesium Compounds	455	
7.4.1.2	Method 2:	Addition of Organometallic Complexes to Thallium(III) Salts ..	456	
7.4.1.3	Method 3:	Disproportionation of Thallium(I) Salts	456	
	Applications of Product Subclass 1 in Organic Synthesis			457
7.4.1.4	Method 4:	Ketone Synthesis	457	
7.4.1.5	Method 5:	Alkylation Reactions	458	
7.4.1.5.1	Variation 1:	Stoichiometric Alkylation Reactions	458	
7.4.1.5.2	Variation 2:	Catalytic Alkylation Reactions	459	
7.4.2	Product Subclass 2: Tetraorganothallium(III) “Ate” Complexes			460
	Synthesis of Product Subclass 2			460
7.4.2.1	Method 1:	Addition of Organolithium Compounds to Triorganothallium(III) Complexes	460	
7.4.2.2	Method 2:	Addition of Organolithium Compounds to Diorganothallium(III) Complexes	460	
	Applications of Product Subclass 2 in Organic Synthesis			461
7.4.2.3	Method 3:	Addition to Ketones	461	
7.4.2.4	Method 4:	[1,2] Addition to Enones	461	
7.4.2.5	Method 5:	[1,4] Addition to Enones	462	
7.4.2.6	Method 6:	Chemoselective Reactions with Enones	462	
7.4.3	Product Subclass 3: Diorganothallium(III) Complexes			464
	Synthesis of Product Subclass 3			464
7.4.3.1	Method 1:	Addition of Organometallic Complexes to Thallium(III) Salts ..	464	
7.4.3.2	Method 2:	Hydrolysis of Triorganothallium(III) Derivatives	465	
	Applications of Product Subclass 3 in Organic Synthesis			465
7.4.3.3	Method 3:	Synthesis of Triorganothallium(III) Derivatives and Their “Ate” Complexes	465	
7.4.3.4	Method 4:	Synthetic Utility of Diarylthallium(III) Carboxylates	465	

7.4.4	Product Subclass 4: Monoorganothallium(III) Derivatives	466
	Synthesis of Product Subclass 4	466
7.4.4.1	Method 1: Addition of Organometallic Complexes to Thallium(III) Salts	466
7.4.4.2	Method 2: Direct Thallation	466
	Applications of Product Subclass 4 in Organic Synthesis	467
7.4.4.3	Method 3: Functionalization of Aromatic Complexes	467
7.4.4.3.1	Variation 1: By Direct Thallation–Iodination	467
7.4.4.3.2	Variation 2: By Direct Thallation–Thallium Replacement	469
7.4.4.4	Method 4: Functionalization of Alkenes	471
7.4.4.5	Method 5: Oxidative Rearrangements	471
7.4.4.6	Method 6: Oxidation of Alkynes	472
7.4.4.7	Method 7: α -Hydroxylation of Ketones	472
7.4.4.8	Method 8: Coupling of Arenes	474
7.4.4.9	Method 9: Palladium-Catalyzed Reactions	475
7.4.5	Product Subclass 5: Organothallium(I) Complexes	478
	Synthesis of Product Subclass 5	478
7.4.5.1	Method 1: Synthesis of Cyclopentadienylthallium(I) by Meister’s Method	478
	Applications of Product Subclass 5 in Organic Synthesis	479
7.4.5.2	Method 2: Addition to Aliphatic Halides	479
7.4.5.3	Method 3: Synthesis of Cyclopentadienyl-Containing Organometallic Complexes	480
7.4.6	Product Subclass 6: Inorganic Thallium(I) Derivatives	480
	Synthesis of Product Subclass 6	480
7.4.6.1	Method 1: Ligand Exchange	480
	Applications of Product Subclass 6 in Organic Synthesis	481
7.4.6.2	Method 2: Monoalkylation of β -Dicarbonyl Derivatives	481
7.4.6.3	Method 3: Additives in Palladium-Catalyzed Reactions	482
7.5	Product Class 5: Beryllium Compounds H. Yasuda	
7.5	Product Class 5: Beryllium Compounds	487
7.5.1	Product Subclass 1: Beryllium Hydride Derivatives	488
	Synthesis of Product Subclass 1	488
7.5.1.1	Method 1: Synthesis of Organoberyllium Hydrides	488
7.5.1.2	Method 2: Synthesis of Amino- and Alkoxyberyllium Hydrides	490
7.5.1.3	Method 3: Synthesis of Methylberyllium Borohydride	491
7.5.2	Product Subclass 2: Beryllium Halide Derivatives	491
	Synthesis of Product Subclass 2	491
7.5.2.1	Method 1: Reaction of an Alkylberyllium with Halides	491
7.5.2.2	Method 2: Reaction of Beryllium with Alkyl Halides	492

7.5.3	Product Subclass 3: Alkoxy(alkyl)beryllium Compounds	492
	Synthesis of Product Subclass 3	492
7.5.3.1	Method 1: Reaction of an Alkylberyllium Compound with an Alcohol	492
7.5.4	Product Subclass 4: Alkyl(alkylsulfanyl)beryllium Compounds	494
	Synthesis of Product Subclass 4	494
7.5.4.1	Method 1: Alkyl(alkylsulfanyl)beryllium Compounds from Thiols	494
7.5.5	Product Subclass 5: Alkyl(amino)beryllium Compounds	494
	Synthesis of Product Subclass 5	494
7.5.5.1	Method 1: Reaction of an Alkylberyllium Compound with an Amine	494
7.5.6	Product Subclass 6: Diarylberyllium Compounds	496
	Synthesis of Product Subclass 6	496
7.5.6.1	Method 1: Reaction of Beryllium with Diarylmercury(II) Compounds	496
7.5.7	Product Subclass 7: Bis(η^5-cyclopentadienyl)beryllium and Other Unsaturated Derivatives	496
	Synthesis of Product Subclass 7	496
7.5.7.1	Method 1: Reaction of Beryllium Halides with Sodium Cyclopentadienide	496
7.5.7.2	Method 2: Reaction of Beryllium Chloride with Potassium Pentadienide	497
7.5.8	Product Subclass 8: Dialkylberyllium Compounds	498
	Synthesis of Product Subclass 8	498
7.5.8.1	Method 1: Reaction of Alkylberyllium Compounds with Dialkylmercury(II) Compounds	498
7.5.8.2	Method 2: Alkylation of Beryllium Halides	498
7.5.9	Product Subclass 9: Anionic Beryllium Complexes	499
	Synthesis of Product Subclass 9	499
7.5.9.1	Method 1: Preparation of Halide or Cyanide Complexes	499
7.5.9.2	Method 2: Preparation of Alkali Metal Alkyl- and Arylberyllate Compounds	500
7.5.9.3	Method 3: Preparation of a Hydride Complex	500
7.6	Product Class 6: Magnesium Compounds	
<hr/>		
7.6.1	Product Subclass 1: Magnesium Metal J.-H. Zhang, C. C. K. Keh, and C.-J. Li	
<hr/>		
7.6.1	Product Subclass 1: Magnesium Metal	503
	Synthesis of Product Subclass 1	503
7.6.1.1	Method 1: Formation of Rieke Magnesium from Magnesium Halides	503
	Applications of Product Subclass 1 in Organic Synthesis	504

7.6.1.2	Method 2:	Magnesium Amalgam for Pinacol Coupling of Carbonyl Compounds	504
7.6.1.3	Method 3:	Magnesium with a Metal Halide as the Reducing Agent	505
7.6.1.4	Method 4:	Magnesium in Methanol for Reduction Reactions	506
7.6.1.4.1	Variation 1:	Selective Reduction of α,β -Unsaturated Compounds	506
7.6.1.4.2	Variation 2:	Reductive Cleavage Reactions	508
7.6.1.4.3	Variation 3:	Other Reductive Applications	509
7.6.1.5	Method 5:	Low-Valent Titanium Reagents from Reduction by Magnesium	510
7.6.2	Product Subclass 2: Magnesium Hydride J.-H. Zhang, C. C. K. Keh, and C.-J. Li		
7.6.2	Product Subclass 2: Magnesium Hydride 513		
	Synthesis of Product Subclass 2 513		
7.6.2.1	Method 1:	Formation of Activated Magnesium Hydride	513
	Applications of Product Subclass 2 in Organic Synthesis 514		
7.6.2.2	Method 2:	Magnesium Hydride as a Reducing Agent	514
7.6.2.3	Method 3:	Organomagnesium Hydrides as Reducing Agents	515
7.6.3	Product Subclass 3: Magnesium–Metal Reagents J.-H. Zhang, C. C. K. Keh, and C.-J. Li		
7.6.3	Product Subclass 3: Magnesium–Metal Reagents 517		
	Synthesis of Product Subclass 3 517		
7.6.3.1	Method 1:	Reaction of Dimethyl(phenyl)silyllithium with Methylmagnesium Iodide	517
7.6.3.2	Method 2:	Reaction of Tributylstannyllithium with Methylmagnesium Iodide	518
	Applications of Product Subclass 3 in Organic Synthesis 518		
7.6.3.3	Method 3:	Metallometalation of Alkyne Derivatives	518
7.6.4	Product Subclass 4: Alkynyl Grignard Reagents A. Yanagisawa		
7.6.4	Product Subclass 4: Alkynyl Grignard Reagents 523		
	Synthesis of Product Subclass 4 523		
7.6.4.1	Method 1:	Alkynylmagnesium Halides from Alk-1-yne and Alkylmagnesium Halides	523
	Applications of Product Subclass 4 in Organic Synthesis 524		
7.6.4.2	Method 2:	Displacement Reactions	524
7.6.4.3	Method 3:	Additions to Carbonyl Compounds	524

7.6.4.4	Method 4:	Reactions with Carboxylic Acid Derivatives	524
7.6.4.5	Method 5:	Additions to Aza Aromatics	525
7.6.5	Product Subclass 5: Aryl Grignard Reagents		
	A. Yanagisawa		
7.6.5	Product Subclass 5: Aryl Grignard Reagents		527
	Synthesis of Product Subclass 5		527
7.6.5.1	Method 1:	Arylmagnesium Halides from Aryl Halides and Magnesium ..	527
7.6.5.1.1	Variation 1:	From Aryl Halides and Activated Magnesium	528
	Applications of Product Subclass 5 in Organic Synthesis		529
7.6.5.2	Method 2:	Transmetalations with Metal Halides	529
7.6.5.3	Method 3:	Nucleophilic Aromatic Substitutions	529
7.6.5.4	Method 4:	Additions to Carbonyl Compounds	530
7.6.5.5	Method 5:	Reactions with Carboxylic Acid Derivatives	530
7.6.6	Product Subclass 6: Alkenyl Grignard Reagents		
	A. Yanagisawa		
7.6.6	Product Subclass 6: Alkenyl Grignard Reagents		533
	Synthesis of Product Subclass 6		533
7.6.6.1	Method 1:	Alkenylmagnesium Halides from Alkenyl Halides and Magnesium	533
7.6.6.1.1	Variation 1:	Buta-1,3-dien-2-ylmagnesium Chloride from 4-Chlorobuta-1,2-diene and Magnesium	534
7.6.6.2	Method 2:	Hydromagnesiation of Alkynes	535
7.6.6.3	Method 3:	Carbomagnesiation of Alkynes	536
	Applications of Product Subclass 6 in Organic Synthesis		537
7.6.6.4	Method 4:	Displacement Reactions	537
7.6.6.5	Method 5:	Addition to Carbonyl Compounds	537
7.6.6.6	Method 6:	Ring Opening of Epoxides	538
7.6.7	Product Subclass 7: Propargylic Grignard Reagents		
	A. Yanagisawa		
7.6.7	Product Subclass 7: Propargylic Grignard Reagents		541
	Synthesis of Product Subclass 7		541
7.6.7.1	Method 1:	Propargylmagnesium Halides or Allenylmagnesium Halides from Propargyl Halides, Magnesium, and Mercury(II) Chloride	541
	Applications of Product Subclass 7 in Organic Synthesis		542
7.6.7.2	Method 2:	Displacement Reactions	542

7.6.7.3	Method 3:	Addition to Carbonyl Compounds	543
7.6.7.3.1	Variation 1:	Barbier-Type Propargylation of Aldehydes	544
7.6.7.4	Method 4:	Ring Opening of Epoxides	545
7.6.7.5	Method 5:	Additions to Aza Aromatics	545
7.6.8	Product Subclass 8: Benzylic Grignard Reagents		
	A. Yanagisawa		
<hr/>			
7.6.8	Product Subclass 8: Benzylic Grignard Reagents		549
	Synthesis of Product Subclass 8		549
7.6.8.1	Method 1:	Benzylmagnesium Halides from Benzyl Halides and Magnesium	549
7.6.8.1.1	Variation 1:	From Benzyl Halides and Activated Magnesium	550
	Applications of Product Subclass 8 in Organic Synthesis		551
7.6.8.2	Method 2:	Displacement Reactions with Alkyl Halides	551
7.6.8.3	Method 3:	Ring Opening of Epoxides and Oxetane	551
7.6.8.4	Method 4:	Additions to Imines	551
7.6.8.5	Method 5:	Additions to Nitriles	552
7.6.8.6	Method 6:	Additions to Nitro Compounds	552
7.6.9	Product Subclass 9: Allylic Grignard Reagents		
	A. Yanagisawa		
<hr/>			
7.6.9	Product Subclass 9: Allylic Grignard Reagents		555
	Synthesis of Product Subclass 9		555
7.6.9.1	Method 1:	Allylic Magnesium Halides from Allylic Halides and Magnesium	555
7.6.9.1.1	Variation 1:	From Allylic Halides and Activated Magnesium	556
7.6.9.2	Method 2:	Hydromagnesiation of Conjugated Dienes	558
	Applications of Product Subclass 9 in Organic Synthesis		558
7.6.9.3	Method 3:	Displacement Reactions with Alkyl Halides	558
7.6.9.3.1	Variation 1:	Displacement Reactions with Allylic Phosphates	559
7.6.9.3.2	Variation 2:	Transmetalations with Metal Halides Including Chlorosilanes	560
7.6.9.4	Method 4:	Addition to Carbonyl Compounds	561
7.6.9.4.1	Variation 1:	Barbier-Type Allylation of Aldehydes	561
7.6.9.5	Method 5:	Reactions with Carboxylic Acid Derivatives	562
7.6.9.6	Method 6:	Addition to Imines	563
7.6.9.6.1	Variation 1:	Addition to Nitriles	563
7.6.9.6.2	Variation 2:	Addition to Aza Aromatics	564
7.6.9.7	Method 7:	Addition to Nitro Compounds	564
7.6.9.8	Method 8:	Addition to Alkenes	565
7.6.9.8.1	Variation 1:	Addition to Conjugated Dienes	568

7.6.10	Product Subclass 10: Alkyl Grignard Reagents		
	K. Oshima		
<hr/>			
7.6.10	Product Subclass 10: Alkyl Grignard Reagents		573
	Synthesis of Product Subclass 10		573
7.6.10.1	Method 1:	Reaction of Simple Alkyl Halides with Magnesium	573
7.6.10.1.1	Variation 1:	Synthesis of Methylmagnesium Halides	574
7.6.10.1.2	Variation 2:	Synthesis of Ethyl- and Butylmagnesium Halides	576
7.6.10.1.3	Variation 3:	Synthesis of Isopropyl-, <i>sec</i> -Butyl-, and Cyclopropyl- magnesium Halides	577
7.6.10.1.4	Variation 4:	Synthesis of Isobutylmagnesium Halides	579
7.6.10.1.5	Variation 5:	Synthesis of <i>tert</i> -Butylmagnesium Halides	580
7.6.10.1.6	Variation 6:	Synthesis of Dialkylmagnesium Compounds	580
7.6.10.2	Method 2:	Reaction of Dihaloalkanes with Magnesium	582
7.6.10.3	Method 3:	Reaction of 1-Haloalk-3-enes, 1-Haloalk-4-enes, or Their Cyclopropyl Synthetic Equivalents with Magnesium	584
7.6.10.4	Method 4:	Reaction of 1-Haloalk-3-yne or Their Cyclopropyl Synthetic Equivalents with Magnesium	586
7.6.10.5	Method 5:	Reaction of Alkoxyalkyl Halides or Their Analogues with Magnesium	587
7.6.10.6	Method 6:	Reaction of (Trimethylsilyl)methyl Halides with Magnesium	588
7.6.10.7	Method 7:	Reaction of Alkyl lithium Compounds with Magnesium Halides	589
	Applications of Product Subclass 10 in Organic Synthesis		589
7.6.10.8	Method 8:	Addition to Carbonyl Compounds	589
7.6.10.8.1	Variation 1:	Synthesis of Alcohols: Addition of Alkyl Groups to Carbonyl Moieties	590
7.6.10.8.2	Variation 2:	Reduction of Hindered Ketones	592
7.6.10.8.3	Variation 3:	Addition of [(Trimethylsilyl)methyl]magnesium Chloride or [(Isopropoxydimethylsilyl)methyl]magnesium Chloride	593
7.6.11	Product Subclass 11: Grignard Reagents with Transition Metals		
	T. Takahashi and Y. Liu		
<hr/>			
7.6.11	Product Subclass 11: Grignard Reagents with Transition Metals		597
	Synthesis of Product Subclass 11		597
7.6.11.1	Method 1:	Grignard Reagents with Catalytic Dichlorobis(phos- phine)nickel(II)	597
7.6.11.2	Method 2:	Coupling Reactions Using Nickel–Phosphine Catalysts	598
7.6.11.2.1	Variation 1:	Nickel-Catalyzed Coupling of Grignard Reagents with Alkyl Compounds	598
7.6.11.2.2	Variation 2:	Nickel-Catalyzed Coupling of Grignard Reagents with Allyl Compounds	599
7.6.11.2.3	Variation 3:	Nickel-Catalyzed Enantioselective Coupling of Grignard Reagents with Allyl Compounds	600

7.6.11.2.4	Variation 4:	Nickel-Catalyzed Coupling of Grignard Reagents with Vinyl or Aryl Compounds	600
7.6.11.2.5	Variation 5:	Nickel-Catalyzed Enantioselective Coupling of Grignard Reagents with Aryl Compounds	602
7.6.11.3	Method 3:	Coupling Reactions Using Catalytic Bis(acetyl-acetonato)nickel(II) or Nickel(II) Chloride	602
7.6.11.4	Method 4:	Coupling Reactions Using Catalytic Nickel(II) Chloride and Buta-1,3-diene	603
7.6.11.5	Method 5:	Grignard Reagents with Catalytic Dichlorobis(phosphine)palladium(II)	604
7.6.11.6	Method 6:	Coupling Reactions Using Palladium Catalysts	604
7.6.11.6.1	Variation 1:	Palladium-Catalyzed Coupling Reactions of Grignard Reagents with Allyl Compounds	604
7.6.11.6.2	Variation 2:	Palladium-Catalyzed Coupling of Grignard Reagents with Vinyl or Aryl Compounds	604
7.6.11.6.3	Variation 3:	Palladium-Catalyzed Enantioselective Coupling of Grignard Reagents	605
7.6.11.7	Method 7:	Ethylmagnesium Bromide with Catalytic Titanium(IV) Isopropoxide	605
7.6.11.7.1	Variation 1:	Reaction of Titanacyclopropane	606
7.6.11.7.2	Variation 2:	Alkylmagnesium Bromide with Catalytic Titanium(IV) Isopropoxide	607
7.6.11.8	Method 8:	Titanacyclopropane and Titanacyclopentene Formation by π -Ligand Exchange	608
7.6.11.9	Method 9:	Isopropylmagnesium Bromide (or Isobutylmagnesium Bromide) with Catalytic Dichlorobis(η^5 -cyclopentadienyl)titanium(IV)	609
7.6.11.10	Method 10:	Butylmagnesium Chloride with Catalytic Dichlorobis(η^5 -cyclopentadienyl)titanium(IV)	609
7.6.11.11	Method 11:	Cyclopropanation	610
7.6.11.11.1	Variation 1:	Enantioselective Formation of Cyclopropanol	610
7.6.11.11.2	Variation 2:	Intramolecular Formation of a Cyclopropanol	611
7.6.11.11.3	Variation 3:	Formation of Cyclopropylamine	611
7.6.11.12	Method 12:	Reduction	612
7.6.11.12.1	Variation 1:	Reduction of Carbon–Heteroatom Double Bonds	613
7.6.11.12.2	Variation 2:	Reduction of Aryl and Vinyl Halides	613
7.6.11.13	Method 13:	Hydromagnesiation of Unsaturated C–C Bonds	613
7.6.11.14	Method 14:	Carbomagnesiation	614
7.6.11.15	Method 15:	Ethylmagnesium Halide with Catalytic Dichlorobis(η^5 -cyclopentadienyl)zirconium(IV)	615
7.6.11.15.1	Variation 1:	Formation of a Zirconium–Ethene Complex	615
7.6.11.15.2	Variation 2:	Catalytic Reactions of the Zirconium–Ethene Complex	616
7.6.11.16	Method 16:	Butylmagnesium Halides with Catalytic Dichlorobis(η^5 -cyclopentadienyl)zirconium(IV)	617
7.6.11.17	Method 17:	Catalytic Reactions Using the Zirconium–Ethene Complex	617
7.6.11.17.1	Variation 1:	Ethylmagnesiation of Alkenes (Dzhe-milev Reaction)	617
7.6.11.17.2	Variation 2:	Enantioselective Ethylmagnesiation of Alkenes	618
7.6.11.17.3	Variation 3:	Ethylmagnesiation of Alkynes	618

7.6.11.17.4	Variation 4:	Ethylation of Allylic Ethers	619
7.6.11.17.5	Variation 5:	Enantioselective Ethylation of Allylic Ethers	620
7.6.11.17.6	Variation 6:	Cyclobutene Formation	620
7.6.11.18	Method 18:	Reaction of the Zirconium–Butene Complex	621
7.6.11.18.1	Variation 1:	Cyclomagnesiation of Dienes	621
7.6.11.18.2	Variation 2:	Enantioselective Cyclomagnesiation of Dienes	622
7.6.11.18.3	Variation 3:	Cycloallylation	622
7.6.11.18.4	Variation 4:	Alkylation of Styrene	622
7.6.11.19	Method 19:	Grignard Reagents with Iron Compounds	623
7.6.11.20	Method 20:	Grignard Reagents with Manganese Compounds	624

7.6.12 Product Subclass 12: Magnesium Halides

M. Shimizu

7.6.12	Product Subclass 12: Magnesium Halides	629	
	Synthesis of Product Subclass 12	629	
7.6.12.1	Method 1:	Synthesis of Magnesium Fluoride	629
7.6.12.2	Method 2:	Synthesis of Magnesium Chloride	630
7.6.12.3	Method 3:	Synthesis of Magnesium Bromide–Diethyl Ether Complex	630
7.6.12.4	Method 4:	Synthesis of Magnesium Bromide–Tetrahydrofuran Complex	631
7.6.12.5	Method 5:	Synthesis of Magnesium Iodide–Diethyl Ether Complex and Magnesium Iodide	632
	Applications of Product Subclass 12 in Organic Synthesis	633	
7.6.12.6	Method 6:	Reactions Involving Magnesium Fluoride	633
7.6.12.7	Method 7:	Reactions Involving Magnesium Chloride as a Lewis Acid	633
7.6.12.8	Method 8:	Reactions Involving Magnesium Chloride–Sodium Iodide	634
7.6.12.9	Method 9:	Reactions Involving Magnesium Bromide as a Lewis Acid	635
7.6.12.9.1	Variation 1:	Magnesium Bromide Promoted Addition to Aldehydes	635
7.6.12.9.2	Variation 2:	Rearrangement of Epoxides Using Magnesium Bromide	636
7.6.12.10	Method 10:	Bromination Reactions Involving Magnesium Bromide	637
7.6.12.11	Method 11:	Reactions Promoted by Magnesium Iodide	638
7.6.12.11.1	Variation 1:	Rearrangement of Epoxides with Magnesium Iodide	638
7.6.12.11.2	Variation 2:	Other Regioselective Reactions Promoted by Magnesium Iodide	639
7.6.12.12	Method 12:	Iodination Reactions Involving Magnesium Iodide	640

7.6.13 Product Subclass 13: Magnesium Oxide, Alkoxides, and Carboxylates

M. Shimizu

7.6.13	Product Subclass 13: Magnesium Oxide, Alkoxides, and Carboxylates	645	
	Synthesis of Product Subclass 13	645	
7.6.13.1	Method 1:	Synthesis of Magnesium Oxide	645
7.6.13.2	Method 2:	Synthesis of Magnesium Methoxide	645
7.6.13.3	Method 3:	Synthesis of Magnesium 2-Ethoxyethoxide	646

7.6.13.4	Method 4:	Synthesis of Diethyl (Ethoxymagnesium)malonate	646
7.6.13.5	Method 5:	Synthesis of Methylmagnesium Carbonate	647
7.6.13.6	Method 6:	Synthesis of Magnesium Ethyl Malonate	647
7.6.13.7	Method 7:	Synthesis of Magnesium Monoperoxyphthalate Hexahydrate	648
7.6.13.8	Method 8:	Synthesis of Other Magnesium Carboxylates	648
		Applications of Product Subclass 13 in Organic Synthesis	649
7.6.13.9	Method 9:	Reactions Involving Magnesium Oxide	649
7.6.13.10	Method 10:	Reactions Involving Magnesium Methoxide	650
7.6.13.11	Method 11:	Reactions Involving Magnesium 2-Ethoxyethoxide	651
7.6.13.12	Method 12:	Reactions Involving Diethyl (Ethoxymagnesium)malonate	652
7.6.13.13	Method 13:	Reactions Involving Methylmagnesium Carbonate	653
7.6.13.14	Method 14:	Reactions Involving Magnesium Ethyl Malonate	655
7.6.13.15	Method 15:	Oxidations by Magnesium Monoperoxyphthalate Hexahydrate	656
7.6.13.16	Method 16:	Reactions Involving Other Magnesium Carboxylates	656
7.6.14	Product Subclass 14: Magnesium Amides		
	M. Shimizu		
7.6.14	Product Subclass 14: Magnesium Amides		
	Synthesis of Product Subclass 14		
7.6.14.1	Method 1:	Synthesis of Methylmagnesium <i>N</i> -Cyclohexyl- <i>N</i> -isopropylamide	661
7.6.14.2	Method 2:	Synthesis of Magnesium Bis(diisopropylamide)	661
7.6.14.3	Method 3:	Synthesis of Magnesium Bis(2,2,6,6-tetramethylpiperidide)	662
7.6.14.4	Method 4:	Synthesis of Other Magnesium Bis(dialkylamides)	662
		Applications of Product Subclass 14 in Organic Synthesis	663
7.6.14.5	Method 5:	Reactions Involving Methylmagnesium <i>N</i> -Cyclohexyl- <i>N</i> -isopropylamide	663
7.6.14.6	Method 6:	Reactions Involving Magnesium Bis(diisopropylamide)	664
7.6.14.7	Method 7:	Reactions Involving Magnesium Bis(2,2,6,6-tetramethylpiperidide)	664
7.6.14.8	Method 8:	Reactions Involving Magnesium Bis(dialkylamides)	666
7.6.15	Product Subclass 15: Dialkyl- and Diarylmagnesiums		
	J.-H. Zhang, C. C. K. Keh, and C.-J. Li		
7.6.15	Product Subclass 15: Dialkyl- and Diarylmagnesiums		
	Synthesis of Product Subclass 15		
7.6.15.1	Method 1:	Preparation from Grignard Reagents	669
7.6.15.1.1	Variation 1:	Reaction of Grignard Reagents with Organolithium Compounds	669
7.6.15.2	Method 2:	Reaction of Diorganomercury(II) Compounds with Magnesium	670

7.6.15.3	Method 3: Reaction of Hydrocarbons with Magnesium	671
	Applications of Product Subclass 15 in Organic Synthesis	672
7.6.15.4	Method 4: Asymmetric Addition of Dialkylmagnesium to Aldehydes	672
7.6.15.5	Method 5: Application of Magnesium–Diene Reagents in Organic Synthesis	673
7.7	Product Class 7: Calcium Compounds	
	K. Mochida	
7.7	Product Class 7: Calcium Compounds	677
7.7.1	Product Subclass 1: Organocalcium Hydrides	677
	Synthesis of Product Subclass 1	677
7.7.1.1	Method 1: By Direct Reaction	677
7.7.2	Product Subclass 2: Organocalcium Halides	678
	Synthesis of Product Subclass 2	678
7.7.2.1	Method 1: By Direct Reactions	678
7.7.2.2	Method 2: By Indirect Reactions	680
7.7.3	Product Subclass 3: Diorganocalcium Compounds	682
	Synthesis of Product Subclass 3	682
7.7.3.1	Method 1: By Transmetalation and Direct Reactions	682
7.8	Product Class 8: Strontium Compounds	
	N. Miyoshi	
7.8	Product Class 8: Strontium Compounds	685
7.8.1	Product Subclass 1: Alkylstrontium Halides	685
	Synthesis of Product Subclass 1	685
7.8.1.1	Method 1: From Alkyl Halides and Strontium Metal or Activated Strontium	685
	Applications of Product Subclass 1 in Organic Synthesis	687
7.8.1.2	Method 2: Reaction of Carbonyl Compounds with Alkylstrontium Halides	687
7.8.1.3	Method 3: Reaction of Vinylacetylenes with Alkylstrontium Halides	688
7.8.1.4	Method 4: Reactions with Allylic Strontium Reagents	689
7.8.2	Product Subclass 2: Dialkylstrontium	690
	Synthesis of Product Subclass 2	690
7.8.2.1	Method 1: From Dialkylzinc and Strontium Metal	690
	Applications of Product Subclass 2 in Organic Synthesis	690
7.8.2.2	Method 2: Reaction of Vinylacetylenes with Dialkylstrontium	690

7.8.3	Product Subclass 3: Metallocyclic Compounds of Strontium	691
	Synthesis of Product Subclass 3	691
7.8.3.1	Method 1: From 1,3-Dienes and Activated Strontium	691
	Applications of Product Subclass 3 in Organic Synthesis	691
7.8.3.2	Method 2: Reaction of Dichloroalkanes with Metallocyclic Compounds of Strontium	691
7.8.4	Product Subclass 4: Strontium Metallocenes and Related Compounds ...	692
	Synthesis of Product Subclass 4	692
7.8.4.1	Method 1: From Cyclopentadiene and Strontium Metal or Strontium Halide	692
7.8.5	Product Subclass 5: Miscellaneous Compounds of Strontium	692
	Synthesis of Product Subclass 5	692
7.8.5.1	Method 1: Synthesis in Ammonia-Saturated Ethereal Solvents	692
7.9	Product Class 9: Barium Compounds A. Yanagisawa	
<hr/>		
7.9	Product Class 9: Barium Compounds	695
7.9.1	Product Subclass 1: Barium	695
	Synthesis of Product Subclass 1	696
7.9.1.1	Method 1: Activated Barium from Barium Iodide and Lithium Biphenylide	696
	Applications of Product Subclass 1 in Organic Synthesis	696
7.9.1.2	Method 2: Homocoupling of Allylic Halides	696
7.9.1.2.1	Variation 1: Cross Coupling of Allylic Halides with Allylic Phosphates	698
7.9.1.3	Method 3: Reactions of Conjugated Dienes with Dichloroalkanes	698
7.9.2	Product Subclass 2: Barium–Metal Reagents	699
	Synthesis of Product Subclass 2	700
7.9.2.1	Method 1: Barium Ferrate(VI) Monohydrate from Sodium Ferrate and Barium Nitrate	700
7.9.2.2	Method 2: Barium Dihydroxytrioxoruthenate(VI) from Ruthenium(III) Chloride and Barium Nitrate	700
7.9.2.3	Method 3: Barium Manganate from Potassium Permanganate or Potassium Manganate and Barium Chloride	701
	Applications of Product Subclass 2 in Organic Synthesis	701
7.9.2.4	Method 4: Oxidation of Alcohols to Aldehydes and Ketones	701
7.9.2.4.1	Variation 1: Oxidation of Aromatic Aldehydes to Aromatic Acids	702
7.9.2.5	Method 5: Oxidation of Diols to Lactones	703
7.9.2.6	Method 6: Oxidative Coupling of Thiols to Disulfides	704
7.9.2.7	Method 7: Azo Compounds by Oxidative Coupling of Aromatic Amines	705
7.9.2.8	Method 8: Oxidation of Alkanes to Carbonyl Compounds	705
7.9.2.9	Method 9: Dehydrogenation of 4,5-Dihydroimidazoles	706

7.9.3	Product Subclass 3: Barium Hydroxide	707
	Applications of Product Subclass 3 in Organic Synthesis	707
7.9.3.1	Method 1: Partial Hydrolysis of Diesters	707
7.9.3.2	Method 2: Decarboxylations of Dicarboxylic Acid Derivatives	708
7.9.3.2.1	Variation 1: Deacylation of β -Oxo Carbonyl Compounds	709
7.9.3.3	Method 3: Favorskii-Type Ring Contraction of α -Chloro- δ -lactams	710
7.9.3.4	Method 4: Horner–Wadsworth–Emmons Reactions	711
7.9.3.5	Method 5: Suzuki Coupling of Sterically Hindered Arylboronic Acids with Aryl Halides	712
7.9.4	Product Subclass 4: Allylic Barium Reagents	713
	Synthesis of Product Subclass 4	714
7.9.4.1	Method 1: From Allyllithiums and Barium Iodide	714
7.9.4.2	Method 2: From Allylic Halides and Activated Barium	715
	Applications of Product Subclass 4 in Organic Synthesis	716
7.9.4.3	Method 3: Cross-Coupling Reactions with Allylic Halides	716
7.9.4.3.1	Variation 1: With Allylic Phosphates	719
7.9.4.3.2	Variation 2: Silylation of Allylic Barium Reagents	720
7.9.4.3.3	Variation 3: Reactions of Siloxyallylbarium Reagents with Alkyl Halides ...	720
7.9.4.4	Method 4: Additions to Carbonyl Compounds	722
7.9.4.4.1	Variation 1: Additions to Carbonyl Compounds in the Presence of Crown Ethers	723
7.9.4.4.2	Variation 2: Addition to a Carbonyl Compound in the Presence of a Borane	724
7.9.4.4.3	Variation 3: Addition to Carbon Dioxide	725
7.9.4.4.4	Variation 4: Additions of Siloxyallylbarium Reagents to Carbonyl Compounds	726
7.9.4.5	Method 5: Conjugate Additions to Enones	727
7.9.4.6	Method 6: Ring Opening of Epoxides	728
7.9.4.7	Method 7: Additions to Imines	729
	Keyword Index	735
	Author Index	765
